

Amendments to the Specification

Please amend Paragraph [10] as follows:

Figure 3 shows the process of assigning the calls according to the number of connected terminals in the packet method. It is assumed that terminals 210, 220, and 230 are sequentially connected to a base station 280, that the load amount of a packet processing processor 260 is larger than the load amount of the packet processing processor 270, two terminals are ~~a terminal is~~ connected to the packet processing processor 260, and one terminal is ~~two terminals are~~ connected to the packet processing processor 270.
